

# Disinfectant Concentrations and Contact Times for EPA's List of Products Effective against Novel Coronavirus SARS-CoV-2, the Cause of COVID-19

Published 3/10/2020

---

## EXECUTIVE SUMMARY ☰

The World Health Organization has named the COVID-19 outbreak associated with transmission of the novel coronavirus SARS-CoV-2 a public health emergency of international concern. First reported from Wuhan, China, in December 2019, the virus has rapidly spread across continents, with more than 100,000 confirmed cases and more than 3,400 deaths worldwide by early March 2020. The outbreak poses a potent economic threat as well as a public health crisis.

All healthcare providers, including (but not limited to) hospitals, ambulatory/surgical centers, long-term care facilities, physician practices, clinics, and dentistry offices, should be assessing their preparedness and identifying antimicrobial products effective against SARS-CoV-2. The U.S. Centers for Disease Control and Prevention's (CDC) *Interim Infection Prevention and Control Recommendations for Patients with Confirmed Coronavirus Disease 2019 (COVID-19) or Persons Under Investigation for COVID-19 in Healthcare Settings* states:

Routine cleaning and disinfection procedures (e.g., using cleaners and water to pre-clean surfaces prior to applying an EPA-registered, hospital-grade disinfectant to frequently touched surfaces or objects for appropriate contact times as indicated on the product's label) are appropriate for COVID-19 in healthcare settings, including those patient-care areas in which aerosol-generating procedures are performed. Products with EPA-approved emerging viral pathogens claims are recommended for use against COVID-19.

On March 3, 2020, the U.S. Environmental Protection Agency (EPA) published *List N: EPA's Registered Antimicrobial Products for Use Against Novel Coronavirus SARS-CoV-2, the Cause of COVID-19*. Manufacturers of reusable, noncritical medical devices and equipment may recommend the use of certain generic disinfectants (e.g., sodium hypochlorite) at certain concentrations. But List N contains just EPA registration numbers and product brand names.

To help you more easily determine whether any products on the list match manufacturer disinfectant recommendations, we've created a table listing the disinfectant concentrations and contact times for products in List N. To compile this information, we searched EPA product registrations, amendments, master labels, and other applications.

The World Health Organization has named the COVID-19 outbreak associated with transmission of the novel coronavirus SARS-CoV-2 a public health emergency of international concern. First reported from Wuhan, China, in December 2019, the virus has rapidly spread across continents, with more than 100,000 confirmed cases and more than 3,400 deaths worldwide by early March 2020. The outbreak poses a potent economic threat as well as

a public health crisis.

All healthcare providers, including (but not limited to) hospitals, ambulatory/surgical centers, long-term care facilities, physician practices, clinics, and dentistry offices, should be assessing their preparedness and identifying antimicrobial products effective against SARS-CoV-2. The U.S. Centers for Disease Control and Prevention's (CDC) [Interim Infection Prevention and Control Recommendations for Patients with Confirmed Coronavirus Disease 2019 \(COVID-19\) or Persons Under Investigation for COVID-19 in Healthcare Settings](#) states:

Routine cleaning and disinfection procedures (e.g., using cleaners and water to pre-clean surfaces prior to applying an EPA-registered, hospital-grade disinfectant to frequently touched surfaces or objects for appropriate contact times as indicated on the product's label) are appropriate for COVID-19 in healthcare settings, including those patient-care areas in which aerosol-generating procedures are performed. Products with EPA-approved emerging viral pathogens claims are recommended for use against COVID-19.

On March 3, 2020, the U.S. Environmental Protection Agency (EPA) published [List N: EPA's Registered Antimicrobial Products for Use Against Novel Coronavirus SARS-CoV-2, the Cause of COVID-19](#). Manufacturers of reusable, noncritical medical devices and equipment may recommend the use of certain generic disinfectants (e.g., sodium hypochlorite) at certain concentrations. But List N contains just EPA registration numbers and product brand names.

To help you more easily determine whether any products on the list match manufacturer disinfectant recommendations, we've created a table listing the disinfectant concentrations and contact times for products in List N. To compile this information, we searched EPA product registrations, amendments, master labels, and other applications.

Please note that this table is two entries shorter than List N, which contains duplicate listings for two registration numbers (1839-83, 6836-289).

<b>Disinfectant Concentrations and Contact Times for Products Effective against Novel Coronavirus SARS-CoV-2</b>				
<b>EPA Reg. No.</b>	<b>Primary Registered Product Name</b>	<b>Active Disinfectant</b>	<b>Disinfectant Concentration (by weight)</b>	<b>Disinfectant Contact Time (min)</b>
